Table 1. *Continued*

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

[illegible]

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved. The next step is to define the goals and objectives of the project. This will help to determine the scope of the work and the resources required. The third step is to develop a plan of action. This should include a timeline, a budget, and a list of tasks. The fourth step is to implement the plan. This involves setting up the system, testing it, and training the users. The final step is to evaluate the results. This will help to determine if the system is meeting the goals and objectives and if any adjustments need to be made.
